<script src="./js/components/order-form.js"></script>
<script src="./js/app.js"></script>

```

```

</body>
</html>

```

1. Menerapkan Organisasi Kode (Vue Component & Template)

Penerapan: Memisahkan kerangka HTML ke dalam tag `<template>` dan mendaftarkannya ke dalam file Javascript terpisah sebagai Vue.component.

Di File index.html:

HTML

```
<template id="tpl-tracking">
  <div>...isi form tracking...</div></template>
```

Di File js/components/do-tracking.js:

JavaScript

```
Vue.component('do-tracking', {
  template: '#tpl-tracking', // Menghubungkan template HTML dengan Component JS
  props: ['stateData'],
  // ...
});
```

2. Menampilkan Data (Mustaches {{ }} / v-text)

Penerapan: Menggunakan sintaks kumis (mustaches) untuk mencetak data dari state/data Vue langsung ke layar browser.

Di File index.html (Bagian dalam Template):

HTML

```
<h4 style="...">Status Pengiriman:
{{ searchedResult.noDO }}</h4><div><strong>NIM:</strong>
{{ searchedResult.nim }}</div><div><strong>Nama:</strong>
{{ searchedResult.nama }}</div>
```

3. Fungsi Conditional / Pengandaian (v-if, v-show, v-else)

Penerapan: Mengatur elemen mana yang muncul berdasarkan kondisi tertentu (misalnya, apakah user sudah login, tab mana yang aktif, atau apakah hasil pencarian ada).

Di File index.html:

HTML

```
<div v-if="!isLoggedIn" class="login-container"> ... </div><div v-else> ... </div>
<section v-show="tab === 'tracking'">...</section>
<div v-if="searchedResult"> ...tampilkan log... </div><div v-else style="..."> Silakan
cari Nomor DO atau NIM... </div>
```

4. Data Binding (v-bind, v-model) & Pengolahan Data (methods / computed)

Penerapan: Mengikat inputan user ke variabel (v-model), memanipulasi atribut HTML (v-bind), dan mengolah interaksi klik tombol di dalam methods.

Data Binding (Two-way) v-model: ``html

Data Binding (One-way) v-bind (ditulis dengan titik dua :):

HTML

```
<button class="nav-btn" :class="{ active: tab === 'tracking' }">Tracking</button>
```

Methods (Pengolahan Interaksi):

JavaScript

```
// Di file do-tracking.jsmethods: {  
  searchDO() {  
    // Logika untuk mencari DO  
  },  
  addTrackingLog() {  
    // Logika menambah log baru  
  }  
}
```

5. Menerapkan Fungsi Watcher

Penerapan: Mengawasi (watching) perubahan pada variabel tertentu dan langsung bereaksi secara otomatis ketika nilainya berubah.

Di File js/components/do-tracking.js:

JavaScript

```
watch: {  
  // Watcher: Jika user menghapus teks pencarian (kotak menjadi kosong),  
  // otomatis bersihkan hasil pencarian (searchedResult = null)  
  searchQuery(newVal) {  
    if (!newVal) this.searchedResult = null;  
  }  
}
```

6. Pengolahan Array Data (v-for)

Penerapan: Melakukan perulangan (looping) untuk mencetak elemen secara dinamis berdasarkan data Array (baik list Pilihan/Option maupun Baris Tabel/List Log).

Di File index.html:

HTML

```
<option v-for="u in stateData.upbjjList" :value="u">{{ u }}</option>
<div v-for="log in searchedResult.perjalanan">
  <span>[{{ log.waktu }}]</span> - {{ log.keterangan }}</div>
```

7. Formatting Data Teks (Filter)

Penerapan: Mengubah format tampilan raw data menjadi format yang ramah dibaca manusia (seperti merubah angka biasa menjadi format mata uang Rupiah) menggunakan tanda pipe (|).

Penerapan di HTML:

HTML

```
<div><strong>Total      Nilai:</strong>      {{      searchedResult.total      |
formatCurrency }}</div>
```

Logika di Javascript (do-tracking.js):

JavaScript

```
filters: {
  // Mengubah angka 120000 menjadi "Rp 120.000"
  formatCurrency(val) {
    return 'Rp ' + Number(val).toLocaleString('id-ID');
  }
}
```

8. Penggunaan Custom Element & Property Passing (props)

Penerapan: Memanggil Component yang sudah dibuat sebagai sebuah tag HTML kustom ciptaan sendiri (Custom Element), dan melempar data ke dalamnya menggunakan properti kustom.

Di File index.html (Pemanggilan Custom Element):

HTML

```
<do-tracking      :state-data="appState"      @update-data="refreshAppState"></do-
tracking>
```

Di File js/components/do-tracking.js (Penerimaan Prop):

JavaScript

```
Vue.component('do-tracking', {
  template: '#tpl-tracking',
  props: ['stateData'], // Menerima data dari element induk (parent)
  // ...
});
```
